OBJECTIVES
3. OBJECTIVES

- To collect and analyze the stock price index of some of the companies in India. Index values may be considered per second, per minute, per hour according to the network selected.
- To summarize the data for specific number of years.
- Use ‘Neural Networks’ as a tool to design this method for estimating and forecasting the prices.
- To investigate a representative method to forecast the stock prices.
- To observe or model the existing data series to enable future unknown data values to be forecasted accurately.
