AIMS & OBJECTIVES:

In this study area, Researcher would like to find out the impact of irrigation projects on ground water recharge & simultaneously this impact on cropping pattern. The main objectives are sited as below.

1) To find out the existing cropping pattern.

2) To study the irrigated cropping pattern.

3) To examine the physical & economical Factors Favorable for the Construction of irrigation projects.

4) To assess the impact of irrigation projects on wells and cropping pattern.

5) To identify the water recharging limits of irrigation projects.
