Aims and objectives:-

The present investigation was undertaken with keeping in mind of the following objectives.

a) To study and survey the prescribed area and to select the study sites.
b) Collection of water samples for the analysis.
c) Monitoring of drinking water qualities in terms of physicochemical parameters
d) A study of seasonal changes in the drinking water quality over a period of one year
e) To cheque the contamination of minerals in Pravra river and surrounding villages.
f) Physico chemical description of water bodies in Pravra river and surrounding village wells from different locations with respect to hydrology.

*The study may be useful in solving water quality problem of drinking water and regarding human health.

*Such data will help to plan for restoration of river ecosystem using appropriate mechanism.
