In order to study the above objectives primary and secondary data is used. Present study is mainly based upon intensive fieldwork, observations and information given by the pilgrims, guide and local people, shopkeepers at the time of interview which is supplemented by secondary sources. Questionnaire was the main tool used in present study for data collection. Secondary data is collected from the annual reports of various tourist spots in selected 35 tourist centers which includes religious, natural and historical places in study area. The methodology chosen for conducting the study consists of Tourism centers survey. The data collected from different sources has been tabulated and processed through statistical techniques. Quantitative methods and technique are used to convert the data. These methods are useful for the analysis. The final result of the statistical methods and important finding has been presented through the graphs using various cartographic techniques for the quality of work. Secondary source of obtained from census of India publication of Ahmednagar district.
