Research Methodology

Research methodology involves systematic procedures starting from the initial identification of a problem to its final conclusions. Survey has its usefulness both in leading to the formulation of hypothesis and at a more advance stage in pointing them et the test. Their function in a given research depends on how much is already known about the subject and on the purpose for which the information is required. (J.C. Agrawal 1983) Researcher is using Survey method for this study. It is most convenient method. It is very useful in present time. It is not so expensive.

Tool of the study

The instruments that are employed to gather new facts or to explore new fields are called ‘tools’. In the present study researcher will use Self-made tool Self Confidence Scale for this study. The researcher has used questionnaire as an appropriate tool to acquire data because it translate the objectives of the research into specific questions the answers to which will provide the data necessary to test the hypothesis, explore the area defined (population) by the objectives. In the present research, the questionnaire is applied on the teachers of English medium schools of Gujarat.

Construction of Tool

For the preparation of tool, the researcher reviewed the research surveys, past dissertations and journal of educational. The researcher has also collected the views of guide and other experts of education fields for the preparation of this tool.

Self confidence scale is prepared by the researcher to study the self confidence of teachers of Gujarat. It consisted of 100 statements on Likert five points rating scale (Strongly agree, Agree, Strongly disagree, disagree and undecided). The statements are related to physical confidence, techno confidence, social confidence, psychological, readiness environment, stage confidence, status confidence, judgment, peer independence. The researcher gave this tool to 15 experts for the suggestion and improved the tool according their suggestion. Then the researcher standardized the scale with all the terms and conditions. Scoring procedure is decided that 54321 for Strongly agree, Agree, Strongly disagree, Disagree, Undecided respectively and For negative
statements it is 12345 for Undecided, Disagree, Strongly disagree, Agree, Strongly agree respectively.

**Statistical Techniques**

First of all the gathered data will arrange according to the selected variables. Than mean, standard deviation, t test and ANOVA will calculate according to the data. Reliability of the test was found by test retest method and validity of the test will established by comparing the scores of the sample of 50 teachers.

**Conclusion**

In conclusion we can say that today man is faced with the dangers of war, economic hardships, communal and racial prejudices, ecological imbalance and environmental pollution and above all a fast changing social structure that is becoming more complex day by day. Development of self confidence from growth year makes an individual mature, confident and responsible citizen. So, self confidence is the essential part of any teachers than only the teachers will be able to provide guideline and showing path to the upcoming students.
