**Research Methodology:**

The researcher will try to identify and analyze the difficulties in teaching and learning of vocabulary and grammar items at undergraduate classes in the colleges. The colleges are affiliated to Pune University. The colleges are situated in a variety of parts like urban, semi-urban and rural areas in the Nashik district, Maharashtra.

This research concentrates on the teaching of language items, especially vocabulary and grammar, through the Print Media and the Internet.

The researcher will try to provide certain solutions in the form of methods and materials for teaching the selected topics.

The researcher proposes to use the controlled / experimental method for collection of data.

**Selection of Sample:**

The researcher will conduct the tests at the undergraduate classes in a variety of parts of the colleges of the Nashik District, Maharashtra.

The samples to be selected are students SYBA Compulsory English from colleges like urban, semi-urban, and rural areas of the Nashik District.

The criterion for selecting the colleges is:

- **A]** Easy access of the Print Media i.e. Newspapers, Magazines, Textbooks, Dictionaries.
- **B]** The students can afford daily Newspapers and other reference materials.
- **C]** The students can use of the Internet in learning more activities.

The sample will be selected by random selection method with the criterion of representation to both sexes. The samples will then be divided into two groups.

- **A]** Experimental Group
- **B]** Uncontrolled Group

The researcher will be conducted in three stages.
A] Pre-Experiment Activity:

In this activity the researcher will try to find out the level or amount of vocabulary and grammar. The students already know by conducting a diagnosed test on vocabulary and grammar.

B] The Actual Experiment through teaching:

The researcher will teach the samples with the help of newspapers, magazines, dictionary, and textbooks etc. The researcher will also use the internet for teaching of grammar and vocabulary items.

C] Post-Experiment Survey:

The researcher will do the survey of the result of the experiment with the help of a text. Then the researcher will analyse the data to draw conclusions.

Interviews of some teachers-students at undergraduate level will be taken. The researcher will also use the questionnaires supplied to the learners at undergraduate level, for collecting data regarding their problems of written English.

Thus, this study can be classified as a qualitative research; since it focused on how observations can be useful so that they could help in recording the participants' behaviours in a natural environment. The researcher will have the opportunity to collect "live" data from real situations. Therefore, a combination of observation and interview research methods are also necessary.

1.6 Need of Research in this Field:

The goals of teaching English are seemed to be unrealistic; conventional syllabus, lifeless teaching methods, unrealistic evaluation system have miserably failed to produce results of language learning. We have to consider whether we are going to teach English as a subject or as a means of communication for our practical purposes.

Print Media and the Internet are still behind in English language teaching. The teachers will use Print Media and the Internet for practical purpose. It is a novel idea in English language teaching. It tends to be functional.
