Hypothesis

As it is well known a Hypothesis is a statement made on observations and experiments. Scientific hypotheses on previous observations that can not be satisfactorily explained with the available scientific theories. Hypothesis also refers to a provisional idea whose merit requires evaluation. A researcher may not know the outcome of a test as the study is under investigation till its completion remains reasonably under investigation.

The proposed study will be carried out along the following hypotheses :-

1) Mother-daughter relationship is complex and delicate, irrespective of colour, caste, creed, culture, country and religion.
2) Parents play a very crucial role in child development.
3) Mother-daughter relationship is more delicate than father-daughter or father-son relationship.
5) The psychological development of a child depends on the social conditions prevailing in his \ her family.
6) Working women face many problems while child rearing.
7) The parental attitude of 'favoritism' affects relationship between siblings and parent-child.
8) By general observation Indian mothers are more responsible in child rearing than fathers.
9) Generally parents have disregards for their child's-(though grown-up) individuality and identity.
10) Parenting is more a cultivated art than a biological inheritance.
