SELECTION OF SAMPLE AND METHODOLOGY

The study focused on 4 types of wireless protocol. The proposed study is a fact-finding research. For meaningful analysis and for making valid recommendations based on the findings of the study, statistical tools like ratios, percentages, arithmetic averages, trends etc., wherever necessary are to be used in the study. Tables and graphs will be used to substantiate the inferences made in the study. The data for the study has been collected mainly from secondary sources comprising various books, periodicals, journals, IT newspapers etc.

1.4 The Study Plan

The study will be divided into two parts. The first part of the study would deal with the theoretical review of literature on Wireless protocols and growth and present status in relation to digital communication technologies. The second part contains the empirical analysis of collected data. On the whole, the study would be dealt in seven different chapters.

Chapter-I would deal with the Introduction, objectives and scope, methodology, period, sources of data and review of literature for the study.

Chapter-II will be concerned with genesis, development and growth of Digital Communication system in India, Progress and performance of protocols also analysed in this chapter.

Chapter-III will discuss in detail with analyze the impact of protocol in Security in Fixed Vs. Wireless Networks.

Chapter-IV would describe history, growth and present status of each protocols and its performance operating in India.

Chapter-V will envisage comparative study of Wireless protocols under study.

Chapter-VI would encompass the summary of the findings, conclusions, limitations, and scope for further extension of the study.
Chapter-VII Would be Bibliography.
