Objectives

- To study the Digital Locker on the cloud with minimized use of physical documents and enable e-signing of documents through electronically or online.
- To provide Authenticity of the e-documents and thereby eliminating usage of fake documents.
- To provide Secure access to all issued documents through a web portal and mobile application for residents.
- To study open and interoperable standards based architecture.
- To design architecture to support a well-structured standard document format, so that it support easy sharing of documents across departments and agencies.
- To ensure privacy and authorized access to resident’s data.
