RESEARCH METHODOLOGY

DATA COLLECTION:

The study will incorporate an exploratory approach in the phenomenon because it aims to determine the present facts as well as facts that are not yet explored about the phenomenon. Exploratory research will enable the study to look at the problem in both descriptive and exploratory manner. For this study the researcher will collect data from the secondary sources. The secondary sources will be reports of WTO, RBI Reports, World Investment Reports, World Bank Reports, Publications from Ministry of Commerce and, Government of India, Different financial websites and various Newspaper, Journals.

SAMPLE : As research involves macro parameters to be studied the research would be conducted on secondary data for the time period of year 2000 to 2010.

Research Design:

Research Design is a way to systematically solve the research problem. It may be understood as a science of studying how research is done scientifically. In short research Design is the underlying theory of how research should be conducted. The research may be qualitative or quantitative. For this study the quantitative research will be used. This research is descriptive and statistical research as it will compare the current position and impact of FDI on economy of India and BRIC nation. This study also finds the relationship between FDI and GDP growth rate of India.
Analysis Technique:

Statistical tools like measure of central tendency (i.e. mean, median), percentage, and inferential analysis techniques like t-test and trend analysis will be used to analyse the data and testing the hypotheses. To find out the relationship between, the correlation method will be used. To find out the exact effect of sector wise FDI and GDP share growth rate, regression technique will be used.

SCOPE OF THE STUDY

The present study deals with year-wise inflow of the FDI in India and BRIC nations. It also studies the sector-wise inflow of FDI in India and its impact or share in GDP. This study deals with the impact of FDI on gross domestic product and the correlation between FDI and GDP growth rate. This study also examines the role of the government in accelerating the FDI. This study suggests the ways to improve and accelerate the FDI inflow in India. The period covered is from 2000 to 2011.

UTILITY OF THE STUDY

The study is conducted to assess the trends of FDI in India and BRIC nations. This study also deals with the impact of FDI on employment and GDP. The role of the government articles, journals. This study will help a lot in

1. Framing the positive policy to accelerate FDI
2. To adopt the corrective measures to increase the FDI rapidly
3. To understand the relationship between the GDP and FDI, so the GDP growth rate will increase with the help of FDI
4. To develop the different sectors to obtain maximum FDI and
5. To increase the shares of different sectors in FDI
6. To develop the economy of the country.
