1. **Research Methodology:**

The study used survey methods using questionnaire to collect data. There will be two questionnaires: One for librarians for collecting data about library resources and services. The other for users (Faculty, Research Scholars, P.G.Students, U.G.Students) to collect data about library services provided to them. The questionnaire will be distributed by mail to the librarians but efforts will be made to approach personally to users by approaching them to fill up the questionnaire to the best of their knowledge.

After collecting the questionnaires, the data collected will be analysed and interpreted in the form of tables, charts and diagrams to highlight the actual position of the library resources and services.
