1. **Research Methodology** –

Research methodology is a way to solve the problem, to unfold the probable answer, and to test the hypothesis stated. As there are many ways leading to city, likewise there are many methods to solve the problems. This study will apply survey method based on questionnaire, interview schedule and observation.

A questionnaire will be prepared with relevant questions relating to the theme of the research topic and the chapters divided the study. The questionnaire will be produced before the librarians to be filled by them regarding the subject of the research topic.

A interview schedule will also be prepared to take interview of the students asking their views about the services of the library and trend of change from print to e-print journals.

On the basis of the questionnaire and interview schedule, data will be collected and an analysis and interpretation will be made. The analysis will be represented highlighted by the table, charts, diagram etc.

The other source of the collecting the data will be secondary sources available in the library, e.g. Annual reports, budgets, of the University libraries under study. A help of internet, books, articles in journals will also be taken for collecting data.
