Objective of the Present Work:

1] Basic Studies on ecological i.e. physical and biological characteristics of selected creeks.

2] Comparative Analysis of the studies done on ecological characteristics of the selected creeks.

3] Overall detail survey of the molluscan fauna found in and around the selected creek ecosystems in the prescribed study area by using appropriate methods of population dynamics.

4] Comparative analysis of the observations done in the selected creek ecosystems regarding the molluscan diversity found in their respective areas.

5] Biostatistical presentation of the data available through the studies during the prescribed period.
