**Hypothesis**

A hypothesis is a preliminary or tentative explanation or assume by the researcher of what the researcher considers the outcome of an investigation will be. It is an informed/educated guess. It indicates the expectations of the researcher regarding certain variables. It is the most specific way in which an answer to a problem can be stated. The outcome of this research is depending on the validity of the data collected and interpretation of this data.

Research hypotheses are the specific testable predictions made about the independent and dependent variables in the study. Hypotheses are couched in terms of the particular independent and dependent variables that are going to be used in the study. The research hypothesis of this study is as follows.

**Along with this we have identified following Hypothesis** -

**H-1** Effective methods of employee motivation help in the growth of the organization.

**H-2** Effective methods of motivation help to increase employee satisfaction.
