Objective:

The objective of this study is to provide an informative overview about different e-learning approaches, different methods and also different automated tools which has been adopted by different organizations. It will provide the complete knowledge about the e-learning. It includes the fundamentals, performance, advantage, disadvantage, comparative study of both methods and tools and how it evolved, the working, and the technical specifications. The present study will be conducted with the following objectives

1. To examine the history and need of e-learning.
2. To study about the various e-learning approaches.
3. To study about the different e-learning techniques.
4. To compare the different methods and their aspects.
5. To study about the different automated tools for different environment.
6. To analyze the performance of different automated learning tools, that has been used for same environment.
7. To suggest possible measures to select a learning method to improve the quality and the performance.
