INFORMED CONSENT FORM

STUDY TITLE:
A CYTOMORPHOLOGICAL AND CYTOGENETIC STUDY OF EXFOLIATED BUCCAL MUCOSAL CELLS IN TOBACCO CHEWERS

To show that tobacco and its products may cause alterations in the buccal mucosal cells
To study the oral mucosa of subjects by exfoliative cytology and to assess the cytological and nuclear changes therein for early detection of oral lesions thus helping in better treatment and prognosis.
To evaluate genotoxic risk DNA damage can be assessed by cytogenetic markers like micronuclei.
To assess a role of micronuclei counts from normal to precancerous to carcinoma thereby linking this biomarker with neoplastic progression.

Purpose of the informed consent
The purpose of the informed consent is only to determine the patient’s attitudes, motivation and knowledge regarding the study.

What are the possible risks and inconveniences of being in this study?
There are no risks or any inconvenience of being in this study
What happen to the information collected about me?
The information collected will be compiled and tabulated for our research purpose. Statistically analysis of the same shall be made. The information will be stored on paper / computer without identifying you by name. When the results of the study are published, your identity is kept confidential. By signing this form, you are permitting this use of your information

Agreement to take part in the study?
By signing this form you are indicating the following:
This study has been explained to your satisfaction in your own language. Your questions about the study procedures have been answered and based on this information; you volunteer to take part in this study without any financial/ legal encumbrances.

Study contact:
The doctor in charge of this study is Dr Sonia Jaiswal who can be reached at 9839020777

Name of the Subject Date -
Age OPD –no.
Sex Case no.
Contact number
Address

Signature of the subject: -------------------------------

Signature of doctor obtaining consent: ----------------
