METHODOLOGY
A careful investigation specially through search for new facts in any branch of knowledge. Research comprises defining and redefining problem, formulating hypothesis or suggested solutions; collecting, organizing and evaluating data, making deductions and reaching conclusions; and at last carefully testing the conclusions to determine whether they fit the formulating hypothesis.

Keeping in view the above facts, it is essential for the researcher to explain the process and technique, tools used, method of adopting sampling reliability and validity of tools, administration of tools, and collection of data, tabulation and organization of data. Both primary and secondary sources will be adopted in the present study. The method of investigation in the present study is essentially descriptive survey method employed. For the present study, the normative survey method will be applied, because, it is that method of investigation which attempts to describe and interpret what exists at present in the form of conditions, practices, processes, trends, effects, attitude, beliefs etc. The sequence of presentation will be:

- Design of the Study
- Sampling Technique
- Tools Used for Data Collection
WORK PLAN

The researcher will be preferred to divide the study in the following Chapterizations as one of the established part of the doctoral research design

1. Analysis of review
2. Define the problem
3. To find out the solution of the problem
4. Describe result, Discussion and conclusion
