OBJECTIVES

1. To identify a method of popularising scientific research for the common readers
2. To explore the reason why institutions or scientists do not want to popularise articles from scientific journals
3. To find out the efforts taken in publicizing the information contained in the journal article
4. To organize a workshop for reaching out to school students for creating a scientific temper in them so that they end up in taking science as their career.
5. To find out the means of reaching the scientific journal articles to common readers.
6. To undertake an experiment to convert ten scientific research abstracts in simple prose
Hypothesis (if applicable)

H1 Trained science communicator can be considered as one of the key to science popularisation.

H2 By modifying the format of submission of articles, the journal publishers can help in a way to popularising science so as to reach the common readers.

H3 Awareness of the information from scholarly journals may ignite the minds of common people and imbibe new ideas.

H4 The gap between the needs and technology may reduce.
