1. **INTRODUCTION**

Even after 67 years of independence, a large section of Indian population still remains unbanked. This malaise has led generation of financial instability and pauperism among the lower income group who do not have access to financial products and services. However, in the recent years the government and Reserve Bank of India has been pushing the concept and idea of financial inclusion.

Financial inclusion or inclusive financing is the delivery of financial services at affordable cost to socially deprived and low-income segments of society. Financial inclusion is a critical step that requires political will, bureaucratic support and determined persuasion by RBI. It is expected to unleash the hugely untapped potential of that section of Indian economy, which is at the bottom of pyramid.

Financial inclusion will be the next revolution for growth and prosperity in Indian economy.

The objective of Financial Inclusion is to extend financial services to unlock growth potential of economy. In addition, it strives towards a more inclusive growth by making financing available to the poor in particular. Financial Inclusion and Financial Literacy both are twin pillars where Financial Inclusion acts on the supply side i.e. for creating access and financial literacy acts from the demand side i.e. creating a demand for the financial products and services.

K C Chackorty, Deputy Governor, RBI said "Nearly forty years after nationalization of banks, 60% of the country’s population does not have bank accounts and nearly 90% do not get loans," The Committee on Financial Inclusion, headed by Dr. C. Rangarajan, Chairman of the Prime Minister’s Economic Advisory Committee, recommended that each semi-urban/rural bank branch open roughly 250 bank accounts annually which, if successful, would result in approximately 11.5 million accounts across the country. Once the first step of safety of savings is achieved, the poor require access to schemes and
products which allow their savings to grow at rates which provide them growth beyond mere inflation protection.

![Diagram showing relationships between NFA and BC](image.png)

\[ \text{BC} = \text{Banks} + \text{OFIs} + \text{MFI} + \text{IT} \]

NFA = No Frills Saving Bank Account

\[ \text{BC} = \text{Banks} + \text{Other Financial Institutions} + \text{Micro Finance Institutions} + \text{Information Technology} \]

OFI = Insurance Companies, Mutual Funds, Pension Companies

“Financial inclusion may be defined as the process of ensuring access to financial services and timely and adequate credit where needed by vulnerable groups such as weaker sections and low income groups at an affordable cost”\(^1\)

“Financial inclusion is an economic and social development approach that involves providing financial services through institution to low income clients”.\(^2\)

**1.1 ELEMENTS OF FINANCIAL INCLUSION**

There are some major identified priority focus areas that are keys to achieving financial inclusion:

- **Addressing Beneficiary Needs**: It focuses on understanding of Beneficiary needs and translating that knowledge into practice while expanding the range of financial services available to underserved areas.
- **Technology-Enabled Business Models**: Analyzes the potential of new technology-intensive channels to reach new Beneficiary, lower operating costs, increase security, and diversify financial products available to low-income groups.

- **Financial Capability**: Focuses on empowering Beneficiary to know their rights as consumers, and have the skills, attitudes, aspirations, and confidence to exercise those rights.

- Protection To **Beneficiary**: Outlines steps to deepen the implementation of client protection measures for the benefit of consumers and stability of markets.

- **Follow up and Credit Reporting**: Promotes extending credit reporting systems in order to expand access for new beneficiary while managing risk for financial institutions.

### 1.2 MODELS OF FINANCIAL INCLUSION

- **No-frills accounts**: (With very little or no minimum balance), simplification of KYC norms

- **KCC (Kisan Credit Card)**: from the year 1998-99 –to meet production credit requirements and short-term credit needs in a timely and hassle-free manner credit for crop production

- **Lead Bank Scheme**: 1969 aimed at forming a coordinated approach for providing banking facilities. To enable banks to assume their lead role in an effective and systematic manner, all districts in the country (excepting the metropolitan cities of Mumbai, Kolkata, Chennai and certain Union Territories) were allotted among Public Sector Banks and a few Private Sector Banks. The Lead bank role is to act as a consortium leader for co-coordinating the efforts of all credit institutions in each of the allotted districts for expansion of branch banking facilities and for meeting the credit needs of the rural economy. For the preparation of District Credit Plans and monitoring their implementation a Lead bank Officer (LBO) now designated as Lead District Manager was appointed in 1979.
• **Local Area Banks** (1996): Expected to bridge the gap in credit availability and strengthen the institutional credit framework in the rural and semi-urban areas. Although the geographical area of operation of such banks will be limited, they will be allowed to perform all functions of a scheduled commercial bank. Licenses are given out in under-banked or unbanked areas of the country. Some of these local area banks could eventually become full-fledged banks at some stage. The local area banks are likely to have a capital adequacy ratio higher than 15% to offset higher risk arising from being geographically focused. The scheduled commercial banks are required to have a capital adequacy ratio — ratio of capital fund to risk weighted assets expressed in percentage terms — of 12%.

• **Swabhiman**: Opening of Bank accounts covering the habitations with minimum population at least through Business correspondent model providing cash services. Habitations with population more than 1600 in plain areas and 1000 in north-eastern and hilly states as per 2001 census are covered.

• **Ultra small Branches**: Bank officers offering other services, undertake field verification and follow-up banking transactions.

• **Direct Benefit Transfer**: Cash transfer through Aadhar Payment Bridge requires Bank accounts which lead to financial inclusion.

• **Interest subvention scheme**: Facilitates access to cheap credit from the banks indirectly through interest subsidies from the govt. It is a subsidy of interest given by Government to certain sectors like Textiles, Farm. For eg. Textile company borrow from Bank at 10% and Government gives subvention of 2%. Hence net bank takes interest from textiles companies 8%. Other sectors have to pay 10% to the bank. Likewise, Farm or Agriculture sectors borrows from Bank at 10% and they will get 4% subvention from the govt. Certain sectors are covered by the system.
of Differential rate interest (DRI) which is less than base rate. Eg: Educational loans, export credit, agriculture, credit to weaker sections.

- **Priority Sector Lending**: Target of 40% of Net Bank Credit to select few sectors for all banks including foreign private ones;

- **Rashtriya Mahila Kosh (RMK)**: To facilitate credit support to poor women for their socio-economic upliftment.

2. **Why is Financial Inclusion in India Important?**

   The policy makers have been focusing on financial inclusion of Indian rural and semi-rural areas primarily for three most important pressing needs:

1. **Creating a platform for inculcating the habit to save money** – The lower income category has been living under the constant shadow of financial duress mainly because of the absence of savings. The absence of savings makes them a vulnerable lot. Presence of banking services and products aims to provide a critical tool to inculcate the habit to save. Capital formation in the country is also expected to be boosted once financial inclusion measures materialize, as people move away from traditional modes of parking their savings in land, buildings, bullion, etc.

2. **Providing formal credit avenues** – So far the unbanked population has been vulnerably dependent of informal channels of credit like family, friends and moneylenders. Availability of adequate and transparent credit from formal banking channels shall allow the entrepreneurial spirit of the masses to increase outputs and prosperity in the countryside. A classic example of what easy and affordable availability of credit can do for the poor is the micro-finance sector.
3. **Plug gaps and leaks in public subsidies and welfare programme** – A considerable sum of money that is meant for the poorest of poor does not actually reach them. While this money meanders through large system of government bureaucracy much of it is widely believed to leak and is unable to reach the intended parties. Government is therefore, pushing for direct cash transfers to beneficiaries through their bank accounts rather than subsidizing products and making cash payments. This laudable effort is expected to reduce government’s subsidy bill (as it shall save that part of the subsidy that is leaked) and provide relief only to the real beneficiaries. All these efforts require an efficient and affordable banking system that can reach out to all. Therefore, there has been a push for financial inclusion.

3. **SOCIO – ECONOMIC PARAMETERS**

Socio-economic is that part of one’s life where economic activity affecting and shaping social aspects of life. In general, it analyzes how societies progress, stagnate, or regress because of their local or regional or the global economy.

The socio economic factor consists of different social and economic indicators.

**SOCIAL PARAMETERS**

Social indicators describe the well-being of individuals or communities. Indicators are comprised of one variable or several components combined into an index. They used to describe and evaluate community well-being in terms of social, economic, and psychological welfare.

1. The Committee on Financial Inclusion, Chairman: Dr. C. Rangarajan
2. According to the International labor organization (ILO
Major social indicators are shown in table as follows:

<table>
<thead>
<tr>
<th>PARAMETERS</th>
<th>INDICATOR</th>

</table>

- To discuss about the conceptual aspects of financial inclusion
- To point out the reasons for financial exclusion
- To highlight the measures taken by RBI for promoting financial inclusion

- Financial inclusion is the road which India needs to travel towards becoming a global player. An people invest and save more and more will remove vicious circle of poverty and unemployment, it also act as a source of empowerment, better control of finance and allow people to participate more effectively in the economic and social process thereby increase per capita income.

- More financial access will attract more global market players to our country that will result in increasing employment and business opportunities. There are certain problems like
lower financial literacy, lack of awareness, the cost of transaction and customer acquisition is high and it is not at all cost-effective.

- RBI has taken various initiatives to strengthened financial inclusion. Information and communication technology offers the opportunity for the banks to improve financial inclusion for the unbanked people.

and 17% respondents was utilizing dwakra scheme.

- India needs an organizational structure that facilitates inclusion by promoting small banks despite their lack of viability due to high fixed costs.

- Second is the focus on risk mitigation whereby vulnerable sections of society may afford low-cost insurance protection for life, healthcare, agricultural output and any other contingency through formation of micro-insurance firms.

- Third, norms pertaining to priority sector lending targets and the use of government subsidies must
be revisited and institutional changes need to be introduced including a deregulated interest rate environment.

| Santanu Dutta and Pinky Dutta | In this paper we study the effect on literacy percentage and financial inclusion in that state. Literacy is a prerequisite for creating investment awareness, and hence intuitively it seems to be a key tool for financial inclusion. But the above observations imply that literacy alone cannot guarantee high level financial inclusion in a state.

- Branch density in a state measures the opportunity for financial inclusion in that state. Branch density in a state is an important factor in financial inclusion, and hence intuitively it seems to be a key tool for financial inclusion. But the above observations imply that literacy alone cannot guarantee high level financial inclusion in a state.

- Branch density has significant impact on motivation and the advantages of financial inclusion. It is not possible to achieve

| The effect of literacy and bank penetration on financial inclusion in India: A statistical analysis | • Branch density in a state measures the opportunity for financial inclusion in that state. Literacy is a prerequisite for creating investment awareness, and hence intuitively it seems to be a key tool for financial inclusion. But the above observations imply that literacy alone cannot guarantee high level financial inclusion in a state.

- Branch density has significant impact on motivation and the advantages of financial inclusion. It is not possible to achieve
quintile regression are discussed later. Financial inclusion only are discussed by creating investment awareness, without significantly improving the investment opportunities in a state. However if a state/union territory is among the top 20 percent in terms of financial Inclusion, with a given level of literacy, then increase in literacy percentage can further improve the level of financial inclusion in that region. Our data analysis provides support to these claims.

MsApurva A. Chauhan
strengthening financial inclusion adopted various strategies such as no-frill account,

- To evaluate the role of banks towards “financial inclusion”.
- To know the steps taken by a bank achieved by Axis bank regarding financial inclusion, it can be said that the banking sector regarding financial inclusion: A case study of Axis bank plays a crucial role in promoting financial inclusion. To cope up with the challenges to spread financial inclusion, there is a need of viable and strengthening sustainable business models with focus on ac-accessible and affordable products and processes, synergistic partnerships with technology service
providers for efficient handling of low value, large volume transactions and appropriate regulatory and risk management policies that ensure financial inclusion.

- To appreciate the significance of financial inclusion in terms of inclusive growth for sustainable economic development;
- To appreciate the trends of financial inclusion in other select countries.
- To evaluate the extent of financial exclusion in India in comparison to the second highest after China. Further, the rate of financial inclusion distribution of India is also very low.

Financial Inclusion in India: An Evaluation of the Coverage, Progress and Trends

• The importance of financial inclusion arises from the problem of financial exclusion of nearly 3 billion people from the formal financial services across the world.

PM Vighneswara Swami

9
banking services; and about 40% of the bank account holders use their accounts not even once a month.

- Financial inclusion has, in reality, far reaching positive consequences which can help resource poor people to access the formal financial services in order to pull themselves out of abject poverty. The focus on the common man is particularly imperative in India as he is the more often ignored one in the process of economic development. Indeed, with the process of financial inclusion, the attempt should be to lift the resource poor from poverty through
Coordinated action amongst the banks, the government and other related institutions in order to facilitate access to bank accounts and other related services.

- For the success of the financial inclusion initiative what is important is to provide banking services at an affordable cost to the disadvantaged and low income group.
- Commercial banks have to perform a vital role in this regard. However the road towards 100% financial inclusion is yet to be complete. Important areas of financial inclusion performed by commercial banks are: 1. financial
| 2. Elizabeth Kalunda2 | • Find out the degree of financial inclusion in Kenya.

• Find out the relationship between financial inclusion and financial stability. |

| | literacy, 2. Credit counseling, 3. BC/BF model, 4. KYC norms, 5. KCC/GCC, 6. No-frill accounts, 7. Branch expansion, 8. Mobile banking, and other measures such as micro insurance, micro-credit. |
| | The study concludes that intervention measure should continue, the array of products that make up financial inclusion should be identified and provided. Proper measures of financial inclusion which include both access and usage should be applied, since access and usage are not the same but supplementary. |
3. **RESEARCH GAPS AND NEED OF THE STUDY**

The above literature proves beneficial in identifying the following research issues and research gaps. Some of them are as follows:

- In most of the studies there is only one aspect of financial inclusion has been studied. Therefore, multiple effects have not been studied.

- `Almost all the studies have been conducted in rural areas but semi-urban and urban areas have been excluded.

- Most of the studies are based on financial inclusion only. However, what is the role of financial inclusion in inclusive growth has not discussed/studied.

Thus in this study researcher tries to bridge up the some of the most significant research gaps of earlier research. These are:

- In this proposed study, an attempt has been made to measure the socio-economic impact of financial inclusion (Micro finance) based on certain parameters like change in income, expansion of job and business opportunities, change in educational status, social status, Role in society etc.

- The proposed study is more comprehensive and covering urban, semi-urban and rural areas to make study that is more effective.

- In proposed study, the researcher makes comparison of the four blocks of UP state. In addition to that, the future prospects of newly declared financial schemes have been trying to studies.

Therefore, in the current study, an effort has to study the role of financial inclusion and to find out the impact on overall development of weaker section of society.
4. **OBJECTIVE OF THE STUDY**

- To rank the need and examine the current status of financial inclusion in India.
- To study the existing measures of financial inclusion initiated by central and state governments and their implementation.
- To know the awareness level of financial inclusion among public.
- To measure socio-economic impact of financial inclusion on beneficiaries.
- To find out the challenges and prospect of financial inclusion.
- To suggest the action plan to draw the maximum benefit of financial inclusion.

5. **RESEARCH DESIGN AND METHODOLOGY**

The following hypotheses will be tested in proposed study.

**HYPOTHESES**

H01: There is no awareness among the people in respect of financial inclusion.

H02: There is no relationship between Measures of financial inclusion taken by Central Government, State Government and RBI and growth of economically backward society.

H03: The social status does not related to financial inclusion.
**Universe, Sample Areas and Sample Size**

This study will be carried out in the Uttar Pradesh which is one of the largest states of BIMARU states.

Shaded blocks have been selected for study for collecting the responses of beneficiary.

**COLLECTION OF DATA**

The proposed research will be based on primary data and secondary data both.

**Primary data:** - Primary data will be collected through questionnaire /schedule – one for respondents (General people and another for government officials, GramPradhans, Block Development Officers and heads of others departments. In addition to this personal interviews will be also be conducted to get in depth knowledge and information.

**Secondary data:** - The secondary data will be collected from central and state government’s websites, brochures, magazines, articles, journals reports, etc. RBI reports and research papers will also be reviewed time to time.

**Sample selection:** - Systematic Random Sampling Technique Basis.

**Period of study:** - From 2007 to 2017

**Scope of study:** - Agra District from Uttar Pradesh
6. **RESEARCH METHODOLOGY**

To achieve the objective of study the following research methodology will be followed:

- To fulfill objective 1, primary and secondary data from government agencies, interviews of government Officials and general respondents will be conducted and on the basis of weighted mean need of financial inclusion would be ranked.

- To know the awareness level of financial inclusion among public, Collection of primary data will be done by Survey. Chai-square test and test of significance will be used to analyze it.

- To measure socio – economic impact of financial inclusion on beneficiaries, before and after analysis will be made.

**EXPECTED CONTRIBUTION:**

This study will help to know the impact of financial inclusion on social and economic life of the people living at grass root level. This work also find out the level of seriousness of present government and their schemes for the socio – economic upliftment of people in real term.
