Research Methodology
In the research work, the primary as well as secondary data will be used. Different statistical tools and tests, as applicable will be used to suggest and analyze the primary and secondary data.

Research Scholar has worked as a staff Nurse during 1999 to 2003 would like to use the relevant facts and figures that she has observed in these years as primary source of data.

Primary Data:
Respondents: Doctors and Nurses
Sample Size: 650 respondents
Sampling method: Simple Stratified method of sampling
Questionnaire: Doctors and Nurses will be given questionnaire.

Secondary Data:
  a. Document review: Obtaining the actual forms, process and operating documents currently being used.
  b. Records: Analyzing critical incidence from newspaper and research articles.

Work Plan
1. Introduction:
• To gather read and understand the review of literature, it took 5 months to gather material from internet, book review and
  new paper cuttings.

2. Collect different Reviews
   Collection of data: 15 days

   Primary Data:
   Population: Doctors and Nurses
   Sample Size: 500 respondents
   Sampling method: Partially convenient and Simple Random Sampling method will be adopted.
     a. Questionnaire: Doctors and Nurses will be given questionnaire.

   Secondary Data:
   a. Document review: Obtaining the actual forms, process and operating documents currently being used.
   b. Records: Analyzing critical incidence from newspaper and research articles.

3. Survey in Area:
   Collection of data: 1 month
   Multi specialty hospitals covering government and private hospitals in Mumbai.

4. Collect Data:
   Collection of data: 1 month
   The questionnaire will be distributed to Doctors and Nurses working in multi specialty hospitals in Mumbai. The feedback will be taken for interpretation.

5. Data interpretation:
   The data will be collected and interpretation will be done in 3 months

6. Results, Findings:
   Approx 2 months
   The result and findings will depend on statistical techniques

7. Discussion and conclusion:
Approx 2 months
Depending on the data conclusion will be derived

8. Recommendation
Approx 1 month
Suggestion will be put forward which will help in managing patients relative initiated violence
