Methodology

Region of Research
The Geographical location for the study is Mumbai, Thane, and Kalyan District in the state of Maharashtra.

Research Design
The Research conducted shall be of Descriptive and Analytical in Nature

The research design and the steps adopted in research methodology kept in focus the objectives set for the study and the general hypothesis of the study. The Numbers of Null hypothesis were formed for the study shall be also subjected to statics method of testing.

The different respondents of different communities and executives of various Government and Non-Government agencies consisting of 5000 in numbers.

Population and Sampling
The population of study consists of the different respondents of different communities and executives of various Government And Non-Government agencies consisting of 5000 in numbers, selected by sampling method known as Convenient Sampling Method.

Collection of Data
The collection of data consist of both primary and secondary data. The primary data shall be collected by floating a structured questionnaire.

The secondary data collected from the various website, books, and journals, published and published reports.

Statistical Methods
The methods shall be mean, standard deviation and for testing various hypothesis, Chi-Square and other statistical test shall be adopted using various statistical packages and computerized data processing shall be adopted Analysis and Interpretation of Data.
