RESEARCH METHODOLOGY

Type of Study

This study will be descriptive in nature. It will compare the existing tax structure with GST.

It will collect data on various parameters of GST and allied variables as listed below:

1. Supply Chain (Logistics)
2. Pricing
3. Revenue

Sampling :

Population for the study :
Manufacturers
Traders
Government
Sample:
Manufacturers – 5 from single location plants & 5 from multi location plants selected randomly (Stratified Random sampling)
Traders – 5 having single state operations & 5 having multiple state operations
Government – Data to be obtained from mandatory disclosures and Interviews with respective authorities.

Tools for data collection:

1. Interview schedule
2. Questionnaire

Proposed data analysis:

Data collected through interview will be analysed Qualitatively.
Quantitative data will be subjected to inferential data analysis using Z test (To compare the difference between two means)
