OBJECTIVES
These should be identified on the basis of the problem analysis. That means, after reading
the problem analysis it should be immediately clear that the choice of objectives is relevant and justified. The objectives should focus on concepts and problems mentioned in the problem analysis. This research proposal should contain one overall objective describing the general contribution that the research project makes to the subject area as well as one or more specific objectives focusing on discrete tasks that will be achieved during the research. The overall objective may be something that the study will contribute towards but not solve/finish; the overall objective should not be a compilation of the specific objectives. While your problem formulation serves to describe the aim of your thesis, the objectives provide an accurate description of the specific actions you will take in order to reach this aim. As with the problem formulation, the overall objective should be framed in a single sentence.
Objectives are summarized as follows:

1. To study the computer viruses.
2. To study the differences between font-door and back-door attacks.
3. To study different symptoms of viruses.
4. To identify the reasons which cause virus attacks among the personal computer users.
5. To find out how computer viruses and other malware attack computer systems.
6. To gain strategies for preventing both types of attacks.
7. To critical study about what computer viruses are capable of doing and the effects of
   Computer viruses on our society.
