METHODOLOGY

Each research needs to have research methodology where researcher can carry out its study systematically. This study confines to have descriptive research method. Following are the methods used to carry the research.

The research will be done on University of Bahrain. The researcher will study utility of Information literacy skills and how it can be made more efficient.

**Sampling Technique:** Random sampling method would be used so that every item in the population defined in the research has an equal chance of being selected.

**Sample Size:** A sample of 600 will be taken.

**Pilot Survey:** The researcher will first conduct a pilot survey, i.e. a survey on a small scale. This will help the researcher in determining the range of possible answers.

**Main Survey:** A data base would be generated on the basis of the questionnaires.

**TOOLS**

Questionnaire will be constructed by researcher and procedure of construction of questionnaire will be liked to standardize by researcher and reliability and validity will tested and developed by the researcher.

In using questionnaires, researcher relies totally on the honesty and accuracy of participants’ responses.

Researcher administers questionnaires to selected samples of a population (appropriate sample) to learn about the distribution of characteristics, attitudes, or beliefs.

**Data Analysis:** Appropriate parametric tests will be conducted on the basis of the data collected, for data analysis. The study is a cross sectional survey design, in which the patrons will be approached only once, at a single point of time. This will help in investigating the effectiveness of Information Literacy Skills.
Work Plan

1. Survey in area
2. Collected Data
3. Data collection & interpretation
4. Results, findings
