Objectives

- The present work is undertaken with an objective to develop economical, simple, precise, accurate method for estimation of mirabegron, Buprion Hcl in bulk dosage form by HPLC

- Development of cost effective technique for the estimation Aripiprazole using UPLC as a analytical tool.
- Development of the analytical technique using quality by design approach.

- And method validated is done per ICH guidelines

- Moreover the developed method will be better alternative to the reported method with respect to cost, simplicity, time consumption with high sensitivity.
