INTRODUCTION

Corporate Governance is the application of best management practices, compliance of law in true letter and spirit and adherence to ethical standards for effective management and distribution of wealth and discharge of social responsibility for sustainable development of all stakeholders.

-**Institute of Company Secretaries of India**

Corporate Social Responsibility is a management concept whereby business companies integrate social and environmental concerns in their operations and interactions with their stakeholders. Generally CSR is understood as being the way through which a company achieves a balance of economic, environmental and social imperatives (“Triple-Bottom-Line- Approach”), while at the same time addressing the expectations of shareholders and stakeholders.

-**United Nations Industrial Development Organization**

Corporate Governance (CG) means a set of systems, policies, practices, standards put in place by a corporate to ensure that relationship with various stakeholders is maintained in a transparent manner but there is no universal definition of the term “Corporate Governance”. Corporate Governance is most often viewed as both structure and the relationships which determine corporate direction and performance. The soul of corporate governance is transparency, disclosures, accountability and integrity, fairness and responsibility. Since merely law enactment does not ensure good governance. Good governance flows from ethical business practices even when there is no law enactment. A good Corporate Governance Standards are crucial for the integrity of corporations, financial institutions and markets and having bearing on the growth and stability of the economy of a country. The corporate are having the money as well as the power, entrusted upon them by the society so they are accompanied by an equal amount of responsibility.

* The above definition is provided by Institute of Company Secretaries of India in its study material of ethics, governance & sustainability.

Hence there is need to measure the corporate social responsibility fulfill by them towards environment in which they exist. In order to have long term sustenance of business, the Corporate Governance is considered to be a good strategy. Since corporate are operated across the boundary of the country of their Origin, they are facing increasing pressure on two major issues i.e. the demand for more transparency and the need to implement good corporate governance practices.

Corporate Governance does not have a specific best standard and the best practices of Corporate Governance differ from country to country. The term corporate governance attracts the attention worldwide. The shocking scams over the past two decades like Enron Corporation of Houston and LDDS WorldCom in United States of America, Satyam computers in India has itself raised the question over the credibility of corporate financial report as well as caused significant losses to the investors. Now for investors one of the most important facets while making investment is the level of implementation of CG principles and profitability which ensures return of investment. Although the government and regulators had taken initiatives but twenty first century environment is so dynamic that have drive the demand for a high quality of corporate governance.

In India, the Companies Act 2013 enacted on August 30, 2013 which brings radical changes in the sphere of Corporate Governance in India. It is a set to provide a major overhaul in Corporate Governance norms and far reaching implications on the manner in which corporate operates in India. As on September 2015, Securities Exchange Board of India (SEBI) has notified the SEBI (Listing Obligation and Disclosure Requirement) Regulations 2015 for the listed entity who has listed their designated securities on recognized stock exchange to consolidate and streamline the various post listing requirement (existing under listing agreement and diverse SEBI Circulars) to be made strictly by the listed companies in India for different segments of the capital market.

As on 2 June 2017 Securities Exchange Board of India (SEBI) had set up committee under the Chairmanship of Shri Uday Kotak, Executive Vice Chairman and Managing Director of Kotak Mahindra Bank to advice on issues relating to corporate governance. The committee submitted its report on 5th October 2017 for recommendations.
India has the world’s richest tradition of Corporate Social Responsibility (CSR). The term Corporate Social Responsibility may be relatively new to India, but the concept dates back to Mauryan history, where philosopher like Kautilya emphasized on ethical practices and principles while conducting business. India is the first country in the world to have a mandatory Corporate Social Responsibility contribution legislation. The concept of Corporate Social Responsibility is governed by the Section 135 of the Companies Act 2013. India becomes the first country to mandate CSR in the world.

In United Kingdom (UK), the Companies Act 2006 is an act of the Parliament of the United Kingdom which forms the primary source of the United Kingdom Company Law. The United Kingdom Corporate Governance Code 2016 is a part of United Kingdom Company law which sets the standards of good governance practices in relation to board leadership and effectiveness, remuneration, accountability and relations with shareholders. It is administer by the Financial Reporting Council. The Corporate Social Responsibility in the United Kingdom is a part of corporate governance and the Companies act 2006 has now added those pressures by requiring directors to have regard to community and environmental issues when considering their duty to promote the success of their company and by the disclosures to be included in the Business Review.

In India corporate laws have historically drawn impetus from British laws in their contents and interpretation. The pharmaceutical industry is one of the fastest growing industrial sub sector in India and India is expected to become the sixth largest country in the world by 2020. In United Kingdom also it is one of the important industry that plays an important role in the economy. At present UK pharmaceuticals industry is the tenth largest in the world. So the research is being conducted while considering the above facts to find out impact of Corporate Governance disclosures on financial performance in India and United Kingdom in selected pharmaceuticals companies.

The some dimensions of Corporate Governance are as follows:

- **Role and powers of the board:** The board is having primary responsibility to ensure value creation for its stakeholders. Therefore, the pre eminent requirement of good governance is the clarity in roles, responsibilities and accountability of the Board, CEO, and the chairman of the
Board.

- **Board appointment**: A well defined and open procedure must be in place for reappointment as well as for the appointment of new directors.

- **Board Committee**: The board committee plays an important role in ensuring corporate governance and corporate social responsibility as a means of improving board effectiveness and efficiency.

- **Financial and operational reporting**: The board requires to make the financial and non financial aspects reporting in the form of Board reports.

- **Board skill**: A board should be the one that consist of the board members with different skill, experience and knowledge.

- **Board evaluation**: The board must evaluate its performance as well as that of individual directors at periodic interval.

- **Board independence**: Sound corporate governance needs the independent board by having sufficient number of independent directors on the board.

- **Code of Conduct**: It is essential to have the explicitly prescribed norms of ethical practices and code of conduct and it is also communicated to all stakeholders.

- **Board leadership structure**: Board leadership structure can be the dual leadership structure (CEO/ Chairman) or unitary board leadership structure.

- **Board size**: Board size means total number of directors on the board of a company including CEO and Chairman.

- **Board composition**: The board consists of the number of executive and non executive directors.

- **Corporate Social Responsibility**: Corporate as an important part of our economy so they are equally responsible to fulfill their responsibility towards society for overall welfare of the country as India is a developing country.
REVIEW OF LITERATURE

A literature review is simply a summary of what facts already exist about a particular topic. It is always based on secondary sources. The literature investigating is suggesting that the Corporate Governance is still a growing concept. Recent researches have showed the impact of Corporate Governance and Corporate Social Responsibility on various aspects such as financial performance and value of the firm in Indian scenario. In India mostly researches are done related to the corporate governance practices but still there is a need to update the Corporate Governance practices by analyzing the various dimensions of Corporate Governance. These are few studies which had been conducted in recent past years in the area of Corporate Governance. These studies have been classified into two groups:

The result is that the UK law has been slow to move to revise its company law legislation and to some extent it has been able to learn from the experience of other countries. To the contrary, Indian Companies Act 2013 has taken a step ahead towards the rapid changes in the corporate scenario.

<td>Impact of Corporate Governance on Profitability of Banks: A study on Indian listed banks</td>
<td>12th International conference of Indian Accounting Research Foundation Kolkata India (Online)</td>
<td>This paper seeks to explain the relationship between corporate governance and banks performance in listed Indian banks. The paper also determines explicitly what variables explain corporate governance and how they impact on banks performance. The result of the study indicates that the existence of independent directors do not bear any significant relationship with any variable representing performance and profitability of listed banks. The proportion of institutional shareholding bears a positive significant relationship with return on equity. The Duality of Chairman &amp; Managing Director position in banks has significant positive impact on return on assets and capital adequacy ratio and negative effect on net non performing assets.</td>

NEED OF THE STUDY (RESEARCH GAPS)

The findings of reviewed studies show the mixed impact of Corporate Governance (CG) on financial performance. But most of the study taken place before India has mandatory provision regarding CSR so the attempt is made to measure the impact after having mandatory provision regarding CSR. The most of the researches had taken place while considering the effect of CG on financial performance or CSR on financial performance, hardly the research is done while considering both aspects i.e. CG & CSR impact on financial performance. The studies of CG have been conducted by several researches all over the world. But this is a wide area that needs the constant development. India’s corporate sector plays a crucial role in nation building and Corporate Governance is an integral part of the broader governance of the country. A stronger Corporate Governance will enhance the overall confidence in Indian market. Developing country differ from developed country in many ways so by making corporate aware of the facts of CG and CSR, the development of the country will take place at a foster rate as the corporate are also engage themselves in social welfare and focus on having good Corporate Governance. Since no study had yet taken place within a cross country context so there is a need to conduct research from international perspective as today is an era of globalization. There are no specific standards which are considered as the best practices of Corporate Governance as what constitutes as the best practices is a exercise of constant development.

The study on pharmaceuticals industry with international reference has not been conducted by any researcher so far. This study is intended to make comparative study on impact of Corporate Governance disclosures on financial performance of selected pharmaceutical companies with reference to Indian and United Kingdom economy.

MOTIVATION TO THE STUDY

To the best of the Researcher’s Knowledge, this would be quantitative research on impact of CG disclosures and CSR disclosures on financial performance. It will highlight comparison of CG disclosures in India & UK and its impact on financial performance. In June 2017 SEBI had set up a committee with a
view for upgrading the standard of Corporate Governance of listed entity in India. The government is also taking initiatives to improve the standard of Corporate Governance in India with the norms of CSR. The study motivates to analyze that no doubt the financial factor affects the financial performance but at the same time a significant role is also played by the non financial factor.

**OBJECTIVES OF THE STUDY**

The researcher intends to study the impact of Corporate Governance (CG) disclosures on financial performance so that company will more focus on their CG and CSR and also assist the stakeholders in judging the overall profile of the company.

The study will be conducted with the view of the following objectives:

1. To make comparative study of the legal environment of Corporate Governance in India and UK.
2. To analyze the Corporate Governance disclosures in India and UK.
3. To examine the relationship between Corporate Governance disclosures and Financial Performance in selected Pharmaceutical companies in India and UK.
4. To examine the impact of Corporate Social Responsibility disclosure practices on Financial Performance in selected Pharmaceutical Companies in India and UK.
5. To suggest plan for sound Corporate Governance in current business scenario.

**RESEARCH HYPOTHESES:**

To provide the scientific base to the findings, the researcher has constructed the following Null Hypotheses (H₀):

- **H₀₁:** There is no significant difference between Corporate Governance disclosures and financial performance.
- **H₀₂:** There is no significant difference between Corporate Social Responsibility and financial performance.
• H₀³: There is no significance difference in Corporate Governance disclosures in Indian and UK Pharmaceutical companies.

Researcher may frame more hypotheses during the course of study to make study more scientific & relevant.

**RESEARCH METHODOLOGY:**

To accomplish the objectives of the study, the following research methodology is proposed:

- **RESEARCH DESIGN**

  The research is very wide as it will consider qualitative information as well as quantitative information. Hence the research design contains the characteristics of Explanatory, Analytical and Descriptive researches because it will be carried out with specific and evolutionary objectives and utilizes the large number of data and try to establish the relationship between different variables.

- **SAMPLE SIZE AND SELECTION CRITERIA**

  The sample have been selected on the basis of companies listed on National Stock Exchange (NSE) & Bombay Stock Exchange (BSE) in India and on London Stock Exchange (LSE) belongs to the pharmaceuticals sector on the basis of highest market capitalization as on 1st April 2014.

  The following companies which have been selected as per above criteria are as follows:

<table>
<thead>
<tr>

9. Hikma Pharmaceuticals PLC | LSE
10. BTG plc | LSE

DATA COLLECTION

For the purpose of research, researcher will collect the relevant data from the secondary sources. Secondary sources encompasses of published Annual reports and other reports of respective companies available on Websites or Hard copies. Various highly regarded journals and Magazines, Periodicals and Newspapers, SEBI websites etc. are also to be studied. The researcher will consider the share price of the companies under study as one of the parameter for the analysis of financial performance.

DURATION OF STUDY

For the justification of study, a period of five Financial Years viz. 2014-15 to 2018-19 will be taken into consideration.

STATISTICAL TOOLS

For the data analysis, various statistical tools such as Correlation, ANOVA and regression etc, statistical techniques and statistical software like SPSS etc. will be used. In addition to above tools researcher may adopt few other tools during the course of study.
The researcher will use the following Specific Research Methodology:

<table>
