OBJECTIVES:

It is proposed to look into few/most of the objectives from the following.

- To investigate various forms of data privacy threats, including disclosure, monitoring, identification and discrimination, etc.
- To analyze the possibility of new data protection mechanism to maximize data availability without having to compromise data privacy.
- To suggest techniques in which data should remain in its original form without the need for transformation and data analysis can be carried out while maintaining privacy.
- To maximize the utility of data while ensuring privacy.
- To propose a framework to protect privacy in structured and semi-structured data.
